

PROCESS

FEECO continues to be a preferred provider of rotary dryers for the potash mining and processing industry.

FEECO [potash dryers](#) are designed with the unique characteristics of potash in mind to produce an optimal drying solution built for years of reliable service.

As the drum rotates, flights scoop up the potash and drop it through a heated air stream to maximize heat transfer efficiency. A co-current air flow is utilized to maintain the integrity of the product, while avoiding issues such as discoloration or attrition.

PROJECT SPECS

Customer:
Multiple, Proprietary

Equipment Supplied:
17 Rotary Dryers designed and built since 2007

Project Location:
Canada, USA

Industry:
Mining; Processing

Material:
Potash

Project Engineer:
FEECO International, Inc.
