

Project Profile: DAP & MAP Rotary Drum Dryer

PROCESS

FEECO provided this 12' x 90' (3.7 x 27.4m) <u>rotary drum dryer</u> for use in the production of Diammonium Phosphate (DAP) and Monoammonium Phosphate (MAP) to a proprietary fertilizer producer.

The rotary dryer removes moisture from the granular product in order to cure the product into its final form. The use of a rotary dryer has the added advantage of "polishing" the granules, further rounding them as they tumble through the rotating drum.

PROJECT SPECS

Customer: Proprietary

Equipment Supplied: Rotary Drum Dryer

Project Location: Proprietary

Industry: Fertilizer

Material:

Diammonium Phosphate (DAP) & Monoammonium Phosphate (MAP)

Project Engineer: FEECO International, Inc.
