

PROCESS

FEECO engineered and fabricated a 48" wide x 85' long [slider bed conveyor](#) for conveying bark refuse out from under a de-barking drum at a pulp and paper facility producing packaging products.

The slider bed featured a steep trough to minimize spillage of the bark into the surrounding area. FEECO utilized a special low-friction belt along with high-silicone UHMW liners to minimize friction for smooth handling.

PROJECT SPECS

Customer:
Proprietary

Equipment Supplied:
Slider Bed Conveyor

Project Location:
Wisconsin, USA

Industry:
Pulp & Paper

Material:
Bark

Project Engineer:
FEECO International, Inc.
